SYNOPSIS OF THE MINI PROJECT

Name of the Student	Arya A
Batch & Roll Number	MCA S3 , FIT25MCA-2021
Contact Number & Email id	8590150440, aaryapradeep04@gamil.com
Name of the Project Guide	Dr.Rakhi Venugopal
GitHub ID	https://github.com/aryapradeep1
Project Title	InternLink
Area of the Project	Web Application
Date of Submission	

InterLink is a centralized web-based internship management platform designed to facilitate and streamline the internship process for students enrolled in the Four-Year Undergraduate Programme (FYUGP) across Kerala. The system aims to provide a structured platform that connects FYUGP students, Higher Education Institutions (HEIs), and Internship Providing Organisations (IPOs) throughout the complete internship lifecycle.

Through InterLink, students can create their academic profile and view internship opportunities relevant to their programme or discipline. Each internship opportunity provides detailed information such as the organisation, internship domain, duration, mode, available seats, eligibility requirements, selection criteria, and required documents. Students can review these details and submit applications through the platform.

Internship Providing Organisations can publish internship opportunities, define eligibility and selection criteria, review student applications, select suitable candidates, and assign industry mentors. The respective HEI can monitor student applications, provide institutional approval, assign faculty supervisors, and oversee the internship process.

The platform also supports internship monitoring and documentation by allowing students to maintain internship logbooks, record activities and working hours, upload internship reports and certificates, and receive feedback from industry mentors and faculty supervisors. The system further supports completion verification and evaluation of the internship.

InterLink is designed according to the common internship framework of Kerala FYUGP and aims to make the internship process more organised, transparent, accessible, and manageable for students and institutions.

Front End & Back End Tools	Frontend: React.js ,HTML5,CSS3, Bootstrap / Tailwind CSS Backend: Node.js ,Express.js , JWT & bcrypt.js Database: MongoDB Atlas
